Re: Liss Dental Analgesia Device
Model #SBL 601, Serial #1001

Dear Saul:

Our most recent work involved 50 teeth of 22 patients.

Eight teeth required local anesthesia after the procedure was begun. Six teeth were virgin teeth while two were previously filled. Of the virgin teeth five were molars and one was a bicuspid. Of the previously filled teeth, both were molars.

Of the 42 teeth that were completed without the administration of any anesthesia, three were virgin teeth and were all Anterior teeth, while 39 were previously filled.

Of the 39, 18 were anterior teeth, 14 were bicuspid and 7 were molars.

All teeth were subsequently restored with composites.

I trust that this information will be sufficient for your purposes.

Sincerely,

Richard M. Hochman, D.D.S.
